Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, Activin/Inhibin activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and c. N & disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tang YT,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral solerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, centendactic/chemokinetic activity, haemostatic and thrombolytic activity, center diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and c.N.S discreters
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tang YT,

    Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB seq

```
Sequences AAY69576-Y69586 and AAY69598-Y69599 represent peptides that may CC be used to induce anti-IgE (immunoglobulin E) autoantibodies in a dog. CC IgE is an important mediator of canine allergic responses, including Type CC Immediate hypersensitivity. It is estimated that up to 30% of all dogs CC suffer from allergies or allergy-related skin disorders, and allergic CC dermatitis is thought to affect between 3 and 15% of dogs. Common canine CC allergen, the IgE binds to receptors on mast cells. The IgE molecules CC allergen, the IgE binds to receptors on mast cells. The IgE molecules CC can then become cross-linked, which induces the mast cells to release histamine, which leads to the manifestation of allergic symptoms. The peptides of the invention correspond to epitopes of canine IgE, or conservative variations thereof, that are accessible in circulating IgE bund to mast cells. The autoantibodies produced on conservative variations thereof, that are accession only circulating IgE, CC which would exacerbate an ongoing allergic response even in the absence CC ef allergen. Anti-IgE autoantibody induction results in an immune cresponse that targets the IgE-expressing B cell, which affects IgE contents in a dog.

CC the IgE-producing B cell for destruction. The peptides of the invention cresponse in the absence contents in a dog.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

              The invention provides a new human protein with glycoprotease activity. The protein can be expressed by standard recombinant methodology. The glycoprotease-like protein can be used; to screen for specific-binding agents (receptors or ligands) or inhibitors or agonists of its binding interactions; to raise antibodies or elicit an immune response; as a tissue marker; as a nutrient source or supplement; as a research reagent; and as a therapeutic/biologically active agent, e.g. for regulating cell proliferation or differentiation; as immunostimulant or immunosuppressant; as thrombotic agent; for stimulation of tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Glycoprotease; glycoprotease-like protein; cell proliferation; human; immunostimulant; immunosuppressant; thrombotic agent; tissue growth; contraceptive; fertility-promoting agent; hematopoiesis; antimicrobial; anti-inflammatory; anti-tumour; gene therapy; yeast.
                                                                                                                                                                                                       Disclosure; Page 35; 55pp; English.

The peptide products of the invention have anti-allergic activity. The antibodies bind to defined. epitopes on free or B-cell bound IgE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 9; Page 12; 30pp; English.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

#200 protein - variola virus

N;Alternate names: B19R protein (COP)
C;Species: variola virus
C;Date: 06-Jan-1995 #sequence_revision 06-Jan-1995 #text_change 23-Mar-2001
C;Accession: 946877, B36857
R;Kolykhalov, A.A.; B11nov, V.M.; Gytorov, V.V.; Pozdnyakov, S.G.; Chizhikov, V.E.; F
submitted to the EMBL Data Library, April 1992
A;Description: Nucleotide sequence analysis of the region of Variola virus xhol F O H
A;Reference number: 946868
A;Accession: 946877
A;Status: preliminary
A;Molecule type: DNA
A;Residues: 1-354 <KOL>
A;Cross-reference number: A56868
A;Status: preliminary
A;Status: preliminary
A;Status: preliminary
A;Cross-reference s: EMBL:X67117; NID:9516428; PIDN:CAA47529.1; PID:9516438
A;Experimental source: strain India-1967, isolate Ind3

A.Title: The complete DNA sequence of vaccinia virus.
A.Reference number: A4253; MUID:91021027
A.Contents: annotation; possible protein coding frames
A.Note: neither amino acid nor nucleotide sequence is given
C.Superfamily: vaccinia virus surface antigen; immunoglobulin homology
C.Keywords: glycoprotein; surface antigen
F.1-21/Domain: signal sequence #status predicted <SIG>F.22-353/Product: surface antigen #status predicted <SIG>F.25-353/Product: surface antigen #status predicted <SIG>F.267-337/Domain: immunoglobulin homology <IMM>

PROUNDING. 7; NUCLEIC ACIDS RES. 24:4420-4449(1996). -I FUNCTION: DEGRADES SHORT-LIVED REGULATORY AND ABNORMAL PROTEINS IN PRESENCE OF ATP. DEGRADES THE REGULATORY PROTEINS RCSA AND SULA. HYDROLYZES TWO ATPS FOR EACH PEPTIDE BOND CLEAVED IN THE PROTEIN SUBSTRATE (BY SIMILARITY). -I CAPALYTIC ACTIVITY: HYDROLYSIS OF LARGE PROTEINS SUCH AS GLOBIN, CASEIN AND DENATURATED SERUM ALBUMIN, IN PRESENCE OF ATP. -I SUBUNIT: HOMOTETRAMER (BY SIMILARITY). -I SUBCELLULAR LOCATION: CYTOPLASMIC. -I SUBCELLULAR LOCATION: CYTOPLASMIC. -I SUMILARITY: BELONGS TO PETTIDASE FAMILY S16; ALSO KNOWN AS THE LON FAMILY OF ATP-DEPENDENT PROTEASES.	Bacteria; Firmicutes; Bacillus/Clostridium group; Mollicutes; Mycoplasmataceae; Mycoplasma. Mycoplasma. NCBL_TaxID=2104; [1]	RESULT 1 LOW_MYCPN STANDARD; PRT; 795 AA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The peptide is a leucine-enkephalin analogue, opt. having the C-terminal amidated. It is an analgesic having stronger activity compared with the enkephalins.

It is prepd. by conventional chemical synthesis, either in liq. phase or solid phase.
                                                                                                               New peptide and its pharmaceutically acceptable salts \cdot has opioid action, useful for analgesics
                                                                                                                                                                                                                                                                                                                           Misc-difference 5

                                                                                                                                                                                                                                            This peptide is an example of a highly generic formula representing opioid oligopeptides which selectively bind to receptors on cells. The peptides have analgesic, antitussive and antidiarrhoeal activity. They can also be used for treating various cancers such as lung or present cancer, melanoma or neuroblastoma, and as tools for detecting breast cancer, melanoma or neuroblastoma, and as tools for detecting
                                                                                                                                                                                                                                                                                                                                                                                                            New opioid oligo:peptide cpds. - having analgesic, antitussive, antidiarrhoeal and antitumour activity

'Identification and immunocytochemical localization of proctolin in pericardial organs of the shore crab, Carcinus maenas.";

Peptides 7:67-72(1986).

1- FUNCTION: STINULATES CARDIAC OUTPUT AND HINDGUT MOTILITY,
MODULATES VISCERAL AND SKELETAL MUSCLE IN MANY ARTHROPODS.

1- TISSUE SPECIFICITY: FOUND IN THE LATERAL WHITE NEURONS AND IN THE CRAB PERICARDIAL ORGANS.
